# HTML LIST TAGS

## Basic Explanation

- HTML tags for creating lists
- Similar to bullet points or numbering in documents

## Analogue

- Analogy: Writing a shopping list
- Unordered list: Jotting items without order (bullet points)
- Ordered list: Prioritizing items (numbers)
- Description list: Terms and meanings

## Important Rules

- `<li>` in `<ul>` and `<ol>`
- `<dt>` with `<dd>` in `<dl>`
- Proper nesting, e.g., `<ol>` inside `<li>` in `<ol>`

## Deep Dive

- HTML lists: Unordered (`<ul>`), Ordered (`<ol>`), Description (`<dl>`)
- **Unordered**: Bullet points
- **Ordered**: Numbers/letters
- **Description**: Terms and descriptions

## When to use?

- `<**ul**>` (Unordered List): Order doesn't matter, e.g., ingredients.
- `<**ol**>` (Ordered List): Sequence matters, e.g., recipe steps.
- `<**dl**>` (Description List): Glossaries, key-value pairs, e.g., dictionary.

## Summary

- HTML list types: `<ul>`, `<ol>`, `<dl>`
- Structure information logically for readability
